About CSK Steel

CSK Steel is a specialized global steel manufacturer driven by close relations with our customers. CSK Steel is certified to supply CE marked steel structures for the European market in all Execution Classes (EXC1-EXC4).

Our quality assurance system is based on ISO 3834, and we are certified according to 1090-1. External quality audits are performed on an ongoing basis to ensure that our certification is always valid and up-to-date.

At CSK Steel we strive to always offer - and deliver - high-quality steel structures and service, ensured by the continuous development and improvement of our quality assurance system and policies.

We are also certified according to international standards for occupational health and safety DS/OHSAS 18001:2007 / ISO 45001:2018. Our environmental management system is certified according to ISO 14001:2015.

Product Variation

The declared product is produced by CSK in Denmark and Latvia and the results are a weighted average of the two production units; environmental impact varies <10% between locations for most impact categories.

Product description

CE marked steel components are structural steel beams (UNP-UPE-HEA-HEB-IPE-HEM) manufactured by CSK per customer specification. Incoming hot-rolled profiles are first sand blasted, then cut and welded to the desired shape. Products are then surface treated before transportation to building site.

Technical data

Dimensions: IPE 80-600, HEA/B/M 100-600, UNP/UPE 80-400, L 40-200, L 65x50 -200x150, T 30-140 and wide steels:160-500, t=5-40. Steel grade ≤ S355. EN 10025 and EN1090-2 standards are applied.

LCA: Calculation rules

Declared unit

1kg of steel, cradle-to-gate A1-A3 with options

System boundary

Modules are declared according to NPCR 013 Part B.

Declared modules are shown in *Figure 1*. Gray boxes denote modules not declared.

Figure 1: System boundaries

Data quality

General requirements and guidelines concerning the use of generic and specific data and the quality of those are as described in EN 15804: 2012+A1:2013, clause 6.3.6 and 6.3.7., including ISO14044:2006, 4.2.3.6. The data is representative according to temporal, geographical and technological requirements. Databases used have been ecoinvent v3.6. Upstream steel data provided by suppliers. Calculations have been carried out using Simapro v9.

Temporal:

Data for use in module A3 is supplied by the EPD owner and consists of recorded and calculated amounts of specific material and energy consumption. Specific data has been collected for 2019. Generic data has been created or updated within the last 10 years. Any exceptions are documented in the LCA-report.

Geographical:

The product included in this EPD is manufactured in Denmark and Latvia and is representative for the intended market. Best available approximations are used where country specific data are unavailable.

Technological:

Data represents technology in use.

Allocation

The allocation is made in accordance with the provisions of EN 15804. Production activities, energy, water and waste production in-house is allocated equally among all products through mass allocation. Effects of primary production of recycled materials allocated to the main product in which the material was used. The recycling process and transportation of the material is allocated to this analysis.

Cut-off criteria

All major raw materials and all the essential energy is included. The production process for raw materials and energy flows that are included with very small amounts (<1% energy, mass, impact) are not included. This cut-off rule does not apply for hazardous materials and substances.

Benefits and loads beyond the system boundary (Module D)

Module D is calculated as net scrap * LCI for scrap, where the scrap LCI is calculated as the credit for avoided primary production of steel, minus the burden of recycling steel scrap to make new steel, multiplied by the process yield (>1kg scrap is needed to make 1kg new steel). LCI for scrap has been provided by worldsteel (Eurofer, 2019; Worldsteel, 2017).

LCA: Scenarios and additional technical information

The following information describe the scenarios in the different modules of the EPD.

Transport from production place to user (A4)

Type	Capacity utilisation (incl. return) %	Type of vehicle	Distance km	Fuel/Energy consumption	Value (l/t)
Truck	44%	Lorry >32t EURO5	300	0.022 l/tkm	6.6

Scenario for distance to building site according to NPCR 013 Part B.

End of Life (C1, C3, C4)

	Unit	Value
Hazardous waste disposed	kg	0
Collected as mixed construction waste	kg	0
Reuse	kg	0.00
Recycling	kg	0.95
Energy recovery (C3)	kg	0
To landfill (C4)	kg	0.05

Benefits and loads beyond the system (D)

	Unit	Value
Net new scrap	kg	0.20

End of life scenario

Net new scrap is calculated by subtracting the scrap content of outgoing steel from the recycling rate. The average scrap content for European hot-rolled steel is assumed to be 74,6%. Note that outgoing scrap and the parameter for Secondary Material content (SM) differ, wherein the latter accounts for the total amount of scrap needed in the system to fulfill the declared unit.

A 95% recovery rate is assumed, wherein 5% is assumed landfilled - in effect providing a 95% recycling rate. Reuse is not included in this scenario.

Type	Capacity utilisation (incl. return) %	Type of vehicle	Distance km	Fuel/Energy consumption	Value (l/t)
Waste collection	50%	Lorry 21t	19	0.39 l/tkm	7.4
Truck	26%	Lorry 7,5-16t EURO5	278	0.04 l/tkm	12.2

To provide a plausible scenario for transportation to waste processing, a study of Norwegian waste treatment was used as proxy data (Raadal et al., 2009).

Data quality

General requirements and guidelines concerning the use of generic and specific data and the quality of those are as described in EN 15804: 2012+A1:2013, clause 6.3.6 and 6.3.7., including ISO14044:2006, 4.2.3.6. The data is representative according to temporal, geographical and technological requirements. Database used has been ecoinvent v3.6. Calculations have been carried out using Simapro v9. Upstream steel data from supplier EPDs:

EPD	EPD programme	Product type	Data age
1	IBU	Hot-rolled / structural section steel	<10 years
2	AENOR	Hot-rolled / structural section steel	<10 years
3	IBU	Hot-rolled / structural section steel	<5 years
4	IBU	Hot-rolled / structural section steel	<5 years

Allocation

The allocation is made in accordance with the provisions of EN 15804. Production activities, energy, water and waste production in-house is allocated equally among all products through mass allocation. Effects of primary production of recycled materials allocated to the main product in which the material was used. The recycling process and transportation of the material is allocated to this analysis.

Cut-off criteria

All major raw materials and all the essential energy is included. The production process for raw materials and energy flows that are included with very small amounts (<1% energy, mass, impact) are not included. This cut-off rule does not apply for hazardous materials and substances.

Benefits and loads beyond the system boundary (Module D)

Module D is calculated as net scrap * LCI for scrap, where the scrap LCI is calculated as the credit for avoided primary production of steel, minus the burden of recycling steel scrap to make new steel, multiplied by the process yield (>1kg scrap is needed to make 1kg new steel). LCI for scrap has been provided by worldsteel (Eurofer, 2019; Worldsteel, 2017).

LCA: Scenarios and additional technical information

The following information describe the scenarios in the different modules of the EPD.

Transport from production place to user (A4)

Type	Capacity utilisation (incl. return) %	Type of vehicle	Distance km	Fuel/Energy consumption	Value (l/t)
Truck	44%	Lorry >32t EURO5	300	0.022 l/tkm	6.6

Scenario for distance to building site according to NPCR 013 Part B.

End of Life (C1, C3, C4)

	Unit	Value
Hazardous waste disposed	kg	0
Collected as mixed construction waste	kg	0
Reuse	kg	0.00
Recycling	kg	0.95
Energy recovery (C3)	kg	0
To landfill (C4)	kg	0.05

Benefits and loads beyond the system (D)

	Unit	Value
Net new scrap	kg	-0.04

End of life scenario

Net new scrap is calculated by subtracting the scrap content of outgoing steel from the recycling rate. The weighted average scrap content is 99% from suppliers. Note that outgoing scrap and the parameter for Secondary Material content (SM) differ, wherein the latter accounts for the total amount of scrap needed in the system to fulfill the declared unit.

A 95% recovery rate is assumed, wherein 5% is assumed landfilled - in effect providing a 95% recycling rate. Reuse is not included in this scenario.

Transport to waste processing (C2)

Type	Capacity utilisation (incl. return) %	Type of vehicle	Distance km	Fuel/Energy consumption	Value (l/t)
Waste collection	50%	Lorry 21t	19	0.39 l/tkm	7.4
Truck	26%	Lorry 7,5-16t EURO5	278	0.04 l/tkm	12.2

To provide a plausible scenario for transportation to waste processing, a study of Norwegian waste treatment was used as proxy data (Raadal et al., 2009).

CR Components for reuse; MR Materials for recycling; MER Materials for energy recovery; EEE Exported electric energy; ETE Exported thermal energy

Reading example: 9,0 E-03 = 9,0*10⁻³ = 0,009

Additional Norwegian requirements

Greenhouse gas emission from the use of electricity in the manufacturing phase

Norwegian production mix from import, medium voltage (production of transmission lines, in addition to direct emissions and losses in grid) of applied electricity for the manufacturing process (A3).

Data source	Amount	Unit
Econinvent v3.6 - Denmark	0.359	kg CO ₂ -eqv/kWh
Econinvent v3.6 - Latvia	0.604	kg CO ₂ -eqv/kWh

Dangerous substances

- ☒ The product contains no substances given by the REACH Candidate list or the Norwegian priority list
- ☐ The product contains substances given by the REACH Candidate list or the Norwegian priority list that are less than 0,1 % by weight.
- ☐ The product contain dangerous substances, more then 0,1% by weight, given by the REACH Candidate List or the Norwegian Priority list, see table.
- ☐ The product contains no substances given by the REACH Candidate list or the Norwegian priority list. The product is classified as hazardous waste (Avfallsforsiften, Annex III), see table.

Indoor environment

No tests have been carried out on the product concerning indoor climate - Not relevant.

Carbon footprint

Carbon footprint has not been worked out for the product.
